

## About PA Cyber Charter School

The Pennsylvania Cyber Charter School (PA Cyber) is the premier online K-12 educational provider for students and their families in combining the best technology, personal instruction and rigorous curriculum with highly qualified teachers. PA Cyber is a public charter school enrolling more than 8,000 students from nearly all of the 501 school districts in Pennsylvania.

Each PA Cyber student is provided with a new laptop computer, all-in-one printer and internet access, as well as textbooks, materials and lab/project supplies. PA Cyber uses Lincoln Interactive, Little Lincoln, Calvert, and other online curriculum approved by the Pennsylvania Department of Education.

PA Cyber is dedicated to the success of all its students, many of whom come to PA Cyber because they have not had their needs met in a traditional educational setting. The school provides each student with a personalized education plan and a certified teacher (Instructional Supervisor) who acts as liaison and guide. PA Cyber provides tutorials, remedial services and assessments as needed.

The student body includes a wide variety of students, including motivated, independent learners, gifted students, students who travel (e.g. athletes, performers, etc), previously home schooled students, students who were not reaching their potential in a traditional classroom setting, working students, young mothers or fathers, disabled or ill students, credit-deficient students and college-bound students.

Graduates of PA Cyber have gone on to Cornell University, Columbia University, the Coast Guard Academy, New York University, Penn State, University of Pittsburgh, The George Washington University, Drexel University, Duquesne University, University of Delaware and many other colleges and universities. PA Cyber students who take the SAT score higher on average than those who take it at the state and national level.
